

# FCC PART 15C TEST REPORT

No. I16Z40420-SRD02

for

## **TCL Communication Ltd**

## HSUPA/HSDPA/UMTS quad band /GSM quad band mobile phone

Model Name: 5010E

FCC ID: 2ACCJH048

with

**Hardware Version: PIO** 

**Software Version: v5E53** 

Issued Date: 2016-03-15

#### Note:

The test results in this test report relate only to the devices specified in this report. This report shall not be reproduced except in full without the written approval of CTTL.

## 2. Client Information

### 2.1. Applicant Information

Company Name: TCL Communication Ltd

Address /Post: 5F, C building, No. 232, Liang Jing Road ZhangJiang High-Tech Park,

Pudong Area Shanghai, P.R. China. 201203

City: Shanghai Postal Code: 201203 Country: China

Contact Person: Gong Zhizhou

 Contact Email
 zhizhou.gong@tcl.com

 Telephone:
 0086-21-31363544

 Fax:
 0086-21-61460602

### 2.2. Manufacturer Information

Company Name: TCL Communication Ltd

Address /Post: 5F, C building, No. 232, Liang Jing Road ZhangJiang High-Tech Park,

Pudong Area Shanghai, P.R. China. 201203

City: Shanghai Postal Code: 201203 Country: China

Telephone: 0086-21-31363544 Fax: 0086-21-61460602

## 3. Equipment UnderTest (EUT) and Ancillary Equipment (AE)

### 3.1. About EUT

Description HSUPA/HSDPA/UMTS quad band /GSM quad band mobile phone

Model Name 5010E

FCC ID 2ACCJH048

Frequency Band ISM 2400MHz~2483.5MHz Type of Modulation GFSK/π/4 DQPSK/8DPSK

Number of Channels 79

Power Supply 0 DC by Battery

### 3.2. Internal Identification of EUT

| EUT ID* | SN or IMEI | <b>HW Version</b> | SW Version |
|---------|------------|-------------------|------------|
| EUT1    | /          | PIO               | v5E53      |
| EUT2    | /          | PIO               | v5E53      |

<sup>\*</sup>EUT ID: is used to identify the test sample in the lab internally.

#### 3.3. Internal Identification of AE

| AE ID* | Description |   |         |
|--------|-------------|---|---------|
| AE1    | Battery     | / | Inbuilt |
|        |             |   |         |

Model CAB2000041C7(711700096011)

Manufacturer Veken

Capacitance 2000 mAh

## 3.4. Normal Accessory setting

Fully charged battery should be used during the test.

#### 3.5. General Description

AE1

The Equipment Under Test (EUT) is a model of HSUPA/HSDPA/UMTS quad band /GSM quad band mobile phone with integrated antenna. It consists of normal options: lithium battery, charger. Manual and specifications of the EUT were provided to fulfil the test.

<sup>\*</sup>AE ID: is used to identify the test sample in the lab internally.

## 4. Reference Documents

## 4.1. Documents supplied by applicant

EUT feature information is supplied by the applicant or manufacturer, which is the basis of testing.

## 4.2. Reference Documents for testing

The following documents listed in this section are referred for testing.

| Reference   | Title                                                  | Version   |
|-------------|--------------------------------------------------------|-----------|
|             | FCC CFR 47, Part 15, Subpart C:                        |           |
|             | 15.205 Restricted bands of operation;                  | October,  |
| FCC Part15  | 15.209 Radiated emission limits, general requirements; | 2014      |
|             | 15.247 Operation within the bands 902-928MHz,          |           |
|             | 2400-2483.5 MHz, and 5725-5850 MHz.                    |           |
| ANCI 000 40 | American National Standard for Testing Unlicensed      | luna 2012 |
| ANSI C63.10 | Wireless Devices                                       | June,2013 |

## 5. Test Results

### 5.1. Summary of Test Results

Abbreviations used in this clause:

- **P** Pass, The EUT complies with the essential requirements in the standard.
- **F** Fail, The EUT does not comply with the essential requirements in the standard
- NA Not Applicable, The test was not applicable
- NP Not Performed, The test was not performed by CTTL

| SUMMARY OF MEASUREMENT RESULTS  | Sub-clause             | Verdict |
|---------------------------------|------------------------|---------|
| Peak Output Power - Conducted   | 15.247 (b)(1)          | Р       |
| Frequency Band Edges            | 15.247 (d)             | Р       |
| Conducted Emission              | 15.247 (d)             | Р       |
| Radiated Emission               | 15.247, 15.205, 15.209 | Р       |
| Time of Occupancy (Dwell Time)  | 15.247 (a) (1)(iii)    | Р       |
| 20dB Bandwidth                  | 15.247 (a)(1)          | NA      |
| Carrier Frequency Separation    | 15.247 (a)(1)          | Р       |
| Number of hopping channels      | 15.247 (a)(b)(iii)     | Р       |
| AC Powerline Conducted Emission | 15.107, 15.207         | Р       |

Please refer to ANNEX A for detail.

The measurement is made according to ANSI C63.10.

#### 5.2. Statements

CTTL has evaluated the test cases requested by the applicant /manufacturer as listed in section 5.1 of this report for the EUT specified in section 3 according to the standards or reference documents listed in section 4.2

This model is a variant product which model name is 5010G; all the test result has been derived from test report of 5010G.

## **ANNEX A: Detailed Test Results**

#### A.1. Measurement Method

#### A.1.1. Conducted Measurements

The measurement is made according to ANSI C63.10.

- 1). Connect the EUT to the test system correctly.
- 2). Set the EUT to the required work mode (Transmitter, receiver or transmitter & receiver).
- 3). Set the EUT to the required channel.
- 4). Set the EUT hopping mode (hopping or hopping off).
- 5). Set the spectrum analyzer to start measurement.
- 6). Record the values. Vector Signal Analyzer

#### A.1.2. Radiated Emission Measurements

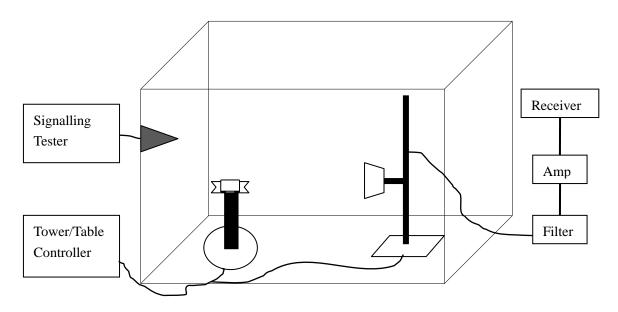

The measurement is made according to ANSI C63.10

The radiated emission test is performed in semi-anechoic chamber. The distance from the EUT to the reference point of measurement antenna is 3m. The test is carried out on both vertical and horizontal polarization and only maximization result of both polarizations is kept. During the test, the turntable is rotated 360° and the measurement antenna is moved from 1m to 4m to get the maximization result.

In the case of radiated emission, the used settings are as follows,

Sweep frequency from 30 MHz to 1GHz, RBW = 100 kHz, VBW = 300 kHz;

Sweep frequency from 1 GHz to 26GHz, RBW = 1MHz, VBW = 1MHz;

### A.2. Peak Output Power – Conducted

Method of Measurement: See ANSI C63.10-clause 7.8.5

a) Use the following spectrum analyzer settings:

Span: 6MHzRBW: 3MHzVBW: 3MHz

Sweep time: 2.5msDetector function: peak

• Trace: max hold

b) Allow trace to stabilize.

- c) Use the marker-to-peak function to set the marker to the peak of the emission.
- d) The indicated level is the peak output power.
- e) A plot of the test results and setup description shall be included in the test report.

#### **Measurement Limit:**

| Standard              | Limit (dBm) |
|-----------------------|-------------|
| FCC Part 15.247(b)(1) | < 30        |

#### **Measurement Results:**

#### For GFSK

| Channel                           | Ch 0<br>2402 MHz | Ch 39<br>2441 MHz | Ch 78<br>2480 MHz | Conclusion |
|-----------------------------------|------------------|-------------------|-------------------|------------|
| Peak Conducted Output Power (dBm) | 4.42             | 5.41              | 4.73              | Р          |

#### Forπ/4 DQPSK

| Channel                           | Ch 0<br>2402 MHz | Ch 39<br>2441 MHz | Ch 78<br>2480 MHz | Conclusion |
|-----------------------------------|------------------|-------------------|-------------------|------------|
| Peak Conducted Output Power (dBm) | 3.93             | 4.56              | 4.27              | Р          |

#### For 8DPSK

| Channel        | Ch 0<br>2402 MHz | Ch 39<br>2441 MHz | Ch 78<br>2480 MHz | Conclusion |
|----------------|------------------|-------------------|-------------------|------------|
| Peak Conducted |                  |                   |                   |            |
| Output Power   | 4.39             | 5.05              | 4.79              | Р          |
| (dBm)          |                  |                   |                   |            |

**Conclusion: PASS** 

## A.3. Frequency Band Edges – Conducted

#### Method of Measurement: See ANSI C63.10-clause 7.8.6

Connect the spectrum analyzer to the EUT using an appropriate RF cable connected to the EUT output. Configure the spectrum analyzer settings as described below (be sure to enter all losses between the unlicensed wireless device output and the spectrum analyzer).

- Span: 10 MHz

Resolution Bandwidth: 100 kHzVideo Bandwidth: 300 kHz

Sweep Time: 5msDetector: PeakTrace: max hold

Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands. Save the spectrum analyzer plot. Repeat for each power and modulation for lowest and highest channel.

Observe the stored trace and measure the amplitude delta between the peak of the fundamental and the peak of the band-edge emission. This is not an abosolute field strength measurement; it is only a relative measurement to determine the amount by which the emission drops at the band edge relative to the highest fundamental emission level.

#### **Measurement Limit:**

| Standard                   | Limit (dBc) |
|----------------------------|-------------|
| FCC 47 CFR Part 15.247 (d) | > 20        |

#### **Measurement Result:**

#### For GFSK

| Channel     | Hopping     | Band Edge Power ( dBc) |        | Conclusion |
|-------------|-------------|------------------------|--------|------------|
| Hopping OFF |             | Fig.1                  | -57.64 | Р          |
| 0           | Hopping ON  | Fig.2                  | -58.11 | Р          |
| 70          | Hopping OFF | Fig.3                  | -65.66 | Р          |
| 78          | Hopping ON  | Fig.4                  | -66.72 | Р          |

#### Forπ/4 DQPSK

| Channel | Hopping     | Band Edge Power ( dBc) |        | Conclusion |
|---------|-------------|------------------------|--------|------------|

## A.4. Conducted Emission

#### Method of Measurement: See ANSI C63.10-clause 7.8.8

Measurement Procedure - Reference Level

- 1. Set the RBW = 100 kHz.
- 2. Set the VBW = 300 kHz.
- 3. Set the span to 5-30 % greater than the EBW.
- 4. Detector = peak.
- 5. Sweep time = auto couple.
- 6. Trace mode = max hold.
- 7. Allow trace to fully stabilize.
- 8. Use the peak marker function to determine the maximum power level in any 100 kHz band segment within the fundamental EBW. Next, determine the power in 100 kHz band segments outside of the authorized frequency band using the following measurement:

Measurement Procedure - Unwanted Emissions

- 1. Set RBW = 100 kHz.
- 2. Set VBW = 300 kHz.
- 3. Set span to encompass the spectrum to be examined.
- 4. Detector = peak.
- 5. Trace Mode = max hold.
- 6. Sweep = auto couple.
- 7. Allow the trace to stabilize (this may take some time, depending on the extent of the span).

Ensure that the amplitude of all unwanted emissions outside of the authorized frequency band (excluding restricted frequency bands) is attenuated by at least the minimum requirements specified above.

#### **Measurement Limit:**

| Standard                   | Limit                                   |
|----------------------------|-----------------------------------------|
| FCC 47 CFR Part 15.247 (d) | 20dB below peak output power in 100 kHz |
|                            | bandwidth                               |

### A.5. Radiated Emission

#### **Measurement Limit:**

| Standard                               | Limit                        |
|----------------------------------------|------------------------------|
| FCC 47 CFR Part 15.247, 15.205, 15.209 | 20dB below peak output power |

In addition, radiated emissions which fall in the restricted bands, as defined in § 15.205(a), must also comply with the radiated emission limits specified in § 15.209(a) (see § 15.205(c)).

The measurement is made according to ANSI C63.10

### Limit in restricted band:

| Frequency of emission | Field strength(uV/m) | Field strength(dBuV/m) |
|-----------------------|----------------------|------------------------|
| (MHz)                 |                      |                        |
| 30-88                 | 100                  | 40                     |
| 88-216                | 150                  | 43.5                   |
| 216-960               | 200                  | 46                     |
| Above 960             | 500                  | 54                     |

#### **Test Condition**

The EUT was placed on a non-conductive table. The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and the EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. This maximization process was repeated with the EUT positioned in each of its three orthogonal orientations.

| Frequency of emission | RBW/VBW       | Sweep Time(s) |
|-----------------------|---------------|---------------|
| (MHz)                 |               |               |
| 30-1000               | 100KHz/300KHz | 5             |
| 1000-4000             | 1MHz/1MHz     | 15            |
| 4000-18000            | 1MHz/1MHz     | 40            |
| 18000-26500           | 1MHz/1MHz     | 20            |

### **Measurement Results:**

Result=P<sub>Mea</sub>+ARPL

## A.6. Time of Occupancy (Dwell Time)

### Method of Measurement: See ANSI C63.10-clause 7.8.4

The EUT must have its hopping function enabled. Use the following spectrum analyzer settings:

- Span = zero span, centered on a hopping channel
- RBW = 1 MHz
- VBW ≥ RBW
- Sweep = as necessary to capture the entire dwell time per hopping channel
- Detector function = peak
- Trace = max hold

Measure a pulse time in time domain at middle frequency and then count the hopping number in 31.6s(which equals with 0.4 multiply 79) of middle frequency ,then multiply the pulse time and hopping number and record them.

#### **Measurement Limit:**

| Standard                           | Limit (ms) |
|------------------------------------|------------|
| FCC 47 CFR Part 15.247(a) (1)(iii) | < 400      |

### **Measurement Result:**

### For GFSK

| Channel | Packet | Dwell Time (ms) |        | Conclusion |

### A.7. 20dB Bandwidth

#### Method of Measurement: See ANSI C63.10-clause 6.9.2

Measurement Procedure - Unwanted Emissions

- 1. Set RBW = 20kHz.
- 2. Set VBW = 100 kHz.
- 3. Set span to 3MHz
- 4. Detector = peak.
- 5. Trace Mode = max hold.
- 6. Sweep = auto couple.
- 7. Allow the trace to stabilize (this may take some time, depending on the extent of the span).

#### **Measurement Limit:**

| Standard                     | Limit |
|------------------------------|-------|
| FCC 47 CFR Part 15.247(a)(1) | NA *  |

Use NdB Down function of the SA to measure the 20dB Bandwidth

\* Comment: This test case is not required according to the latest FCC 47 CFR Part 15.247. But the test results are necessary for "carrier frequency separation" test case, in Annex A.8.

#### **Measurement Results:**

#### For GFSK

| Channel | 20dB Bandwidth (kHz) |        | Conclusion |
|---------|----------------------|--------|------------|
| 0       | Fig.107 870.19       |        | NA         |
| 39      | Fig.108              | 865.38 | NA         |
| 78      | Fig.109              | 870.19 | NA         |

#### Forπ/4 DQPSK

| Channel | 20dB Bandwidth (kHz) |         | Conclusion |
|---------|----------------------|---------|------------|
| 0       | Fig.110 1254.81      |         | NA         |
| 39      | Fig.111              | 1269.23 | NA         |
| 78      | Fig.112              | 1254.81 | NA         |

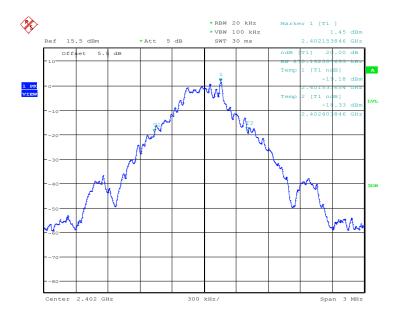

## For 8DPSK

| Channel | 20dB Bandwidth (kHz) |         | Conclusion |
|---------|----------------------|---------|------------|
| 0       | Fig.113 1250.00      |         | NA         |
| 39      | Fig.114              | 1264.42 | NA         |
| 78      | Fig.115              | 1254.81 | NA         |

**Conclusion: NA**

# A.8. Carrier Frequency Separation

Method of Measurement: See ANSI C63.10-clause 7.8.2

The EUT must have its hopping function enabled. Use the following spectrum analyzer settings:

- Span = 3MHz
- RBW=300kHz
- VBW=1MHz
- Sweep = auto
- Detector function = peak
- Trace = max hold
- Allow the trace to stabilize

Search the peak marks of the middle frequency and adjacent channel, then record the separation between them.

\* Comment: This limit should be over 25 kHz or (2/3) \* 20dB bandwidth, whichever is greater.

#### **Measurement Limit:**

| Standard                     | Limit(kHz)                            |
|------------------------------|---------------------------------------|
| FCC 47 CFR Part 15.247(a)(1) | over 25 kHz or (2/3) * 20dB bandwidth |

#### **Measurement Result:**

# For GFSK

| Channel | Carrier frequency separation (kHz) |         | Conclusion |
|---------|------------------------------------|---------|------------|
| 39      | Fig.116                            | 1009.62 | Р          |

## For $\pi/4$ DQPSK

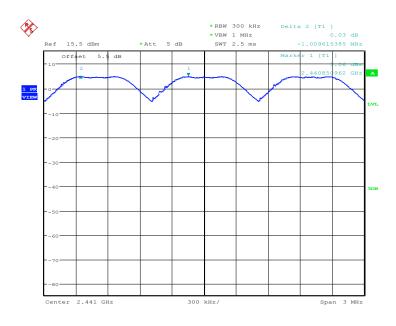

| Channel | Carrier frequency separation (kHz) |         | Conclusion |
|---------|------------------------------------|---------|------------|

# A.9. Number of Hopping Channels

#### Method of Measurement: See ANSI C63.10-clause 7.8.3

The EUT must have its hopping function enabled. Use the following spectrum analyzer settings:

- Span = the frequency band of operation
- RBW = 500kHz
- VBW = 500kHz
- Sweep = auto
- Detector function = peak
- Trace = max hold
- Allow the trace to stabilize

It might prove necessary to break the span up into subranges to show clearly all of the hopping frequencies. Compliance of an EUT with the appropriate regulatory limit shall be determined for the number of hopping channels. A plot of the data shall be included in the test report.

#### **Measurement Limit:**

| Standard                           | Limit                                |
|------------------------------------|--------------------------------------|
| FCC 47 CFR Part 15.247(a) (1)(iii) | At least 15 non-overlapping channels |

#### **Measurement Result:**

#### For GFSK

| Channel | Number of hopping channels |    | Conclusion |
|---------|----------------------------|----|------------|
| 0~39    | Fig.119                    | 70 | D          |
| 40~78   | Fig.120                    | 79 | P          |

#### Forπ/4 DQPSK

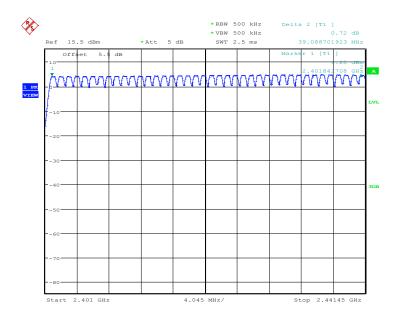

| Channel | Number of hopping channels |    | Conclusion |
|---------|----------------------------|----|------------|
| 0~39    | Fig.121                    | 70 | В          |
| 40~78   | Fig.122                    | 19 | P          |

### For 8DPSK

| Channel | Number of hopping channels |    | Conclusion |
|---------|----------------------------|----|------------|
| 0~39    | Fig.123                    | 70 | D          |
| 40~78   | Fig.124                    | 79 | F          |

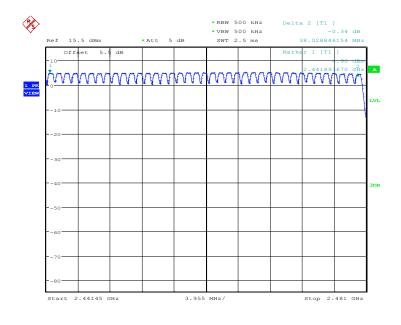

Conclusion: PASS
Test graphs as below:

Date: 5.MAR.2016 16:25:39

## A.10. AC Powerline Conducted Emission

#### **Test Condition**

| Voltage (V) | Frequency (Hz) |  |  |  |
|-------------|----------------|--|--|--|
| 120         | 60             |  |  |  |

### **Measurement Result and limit:**

## **Bluetooth (Quasi-peak Limit)**

| Frequency range<br>(MHz) | Quasi-peak Limit (dBμV) | Conclusion |
|--------------------------|-------------------------|------------|
| 0.15 to 0.5              | 66 to 56                |            |
| 0.5 to 5                 | 56                      | Р          |
| 5 to 30                  | 60                      |            |

NOTE: The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.

## **Bluetooth (Average Limit)**

| Frequency range<br>(MHz) | Average Limit (dBμV) | Conclusion |
|--------------------------|----------------------|------------|
| 0.15 to 0.5              | 56 to 46             |            |
| 0.5 to 5                 | 46                   | Р          |
| 5 to 30                  | 50                   |            |

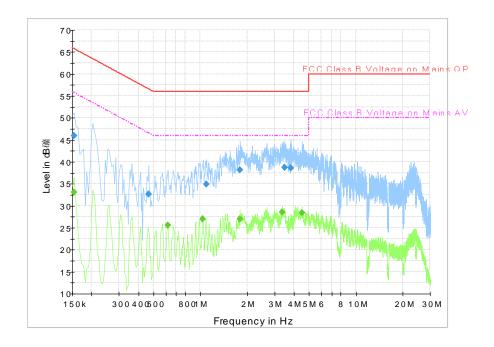

NOTE: The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.

The measurement is made according to ANSI C63.10

Conclusion: PASS
Test graphs as below:

# LABORATORY ACCREDITATION CERTIFICATE

(No. CNAS L0570)

Telecommunication Technology Labs,

Academy of Telecommunication Research, MIIT

No.52, Huayuan North Road, Haidian District, Beijing, China No.51, Xueyuan Road, Haidian District, Beijing, China

to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories(CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing and calibration.

The scope of accreditation is detailed in the attached schedule bearing the same accreditation number as above. The schedule forms an integral part of this certificate.

Date of Issue: 2014-10-29
Date of Expiry: 2017-06-19

Date of Initial Accreditation: 1998-07-03

Signed on behalf of China National Accreditation Service for Conformity Assessment

China National Accreditation Service for Conformity Assessment (CNAS) is authorized by Certification and Accreditation Administration of the People's Republic of China (CNCA) to operate the national accreditation schemes for conformity assessment. CNAS is the signatory to International Laboratory Accreditation Cooperation Multilateral Recognition Arrangement (ILAC MRA) and Asia Pacific Laboratory Accreditation Cooperation Multilateral Recognition Arrangement (APLAC MRA).
